Subject: Airport Runway Lighting

Department: Administration

Runway lights at the Nevada Municipal Airport have been inoperative due to the failure of a regulator, the piece of equipment that controls the runway lights.

Bids were sought and received from the following companies:

- 1) Graybar Electric, Joplin - \$16,297.34
- 2) Flightlight, Sacramento, CA - \$12,787.00
- 3) Strukel Electric, Girard - \$5,500.00

The best bid, from Strukel Electric, is a rebuilt regulator, as opposed to the new regulators bid by the other companies, which resulted in a large savings. The regulator from Strukel meets all our requirements and has a one-year warranty.
